

'Getting to Grips...' online events and video guides

Online guides and webinar sessions for health professionals interested in travel health

NaTHNaC introduced live webinars in 2018 to discuss the dilemmas posed by some common clinical queries to the NaTHNaC Health Professional Advice Line. By 2021, the clinical team were hosting regular lunchtime sessions on Zoom to help Yellow Fever Vaccination Centres with travel health issues.

From 2024, this has been opened up to all health professionals interested in travel health. Whether it be discussing our recent website updates such as our news items, factsheets or country information page disease and vaccination changes, or clinical scenarios from our advice line, we hope to bring our work to life and enable you to make better use of our resources, in your practice.

These events will be live but also recorded and made available on this page. Transcripts available upon request.

Below you will find 'Getting to Grips...' video guides on topics and online event recordings will follow after each session.

Getting to grips with...

The International Certificate of Vaccination or Prophylaxis for yellow fever

A practical guide for health professionals in designated yellow fever vaccination centres (YFVC): please use in conjunction with the [Yellow Fever Zone website](#).

Presented by Rachael Fletcher.

Updated: April 2020

Vaccine scheduling challenges

Do you ever wonder how to complete a course of vaccine when the traveller turns up days or months or years later, having not completed their vaccine schedule?

Join us on this recording of a recent GTG seminar to hear some thoughts on how to manage such situations.

Hosted by Hilary Simons.

Recorded: 25 January 2024

Tick-borne encephalitis

Do you have any questions about tick-borne encephalitis? Would you like more information about how to look at a traveller's risk of TBE?

Listen to this recording of a recent GTG seminar and find out more about tick-borne encephalitis, the vaccine and how you can help your travellers reduce their risk of this infection.

Hosted by Lisa Ford, Mary Gawthrop and Rachael Fletcher.

Recorded: 28 March 2024

Disclaimer: The healthcare professional who is directly advising the traveller remains responsible for individual risk assessments relating to travel and for any clinical decisions made regarding the administration of vaccines, other prophylactics, or for information given regarding travel health.
